## Software Product Announcement

---

# Lighting Analysts, Inc. releases enhancements for **ElumTools® 2021-2019**

*Littleton, Colorado, USA – May 4, 2020*

Lighting Analysts, Inc., a global leader in illumination engineering software, is pleased to announce compelling new features for their Autodesk® Revit® add-in *ElumTools®*.

The latest release\* of *ElumTools®* introduces the capability to easily remove unwanted calculation points by selecting individual objects as masking boundaries or by selecting a Revit Category as the masking entity. This speeds the ability to mask unwanted points dramatically over previous techniques.

This new ElumTools release also preserves the various customizations available in the rendered image viewer for repeated use. This includes viewpoint, font, font size, color and pseudocolor, isoline/spatial map settings among others. “Finally, designers can return to any rendered image and find it in the same state it was previously closed” says, David Speer, Co-Founder and Director of Business Development. “This is a long-requested feature”!

*\*Features also available in ElumTools 2020 and 2019*

For more information visit [ElumTools](#) on the web.
